

# PARASITES AND EXPLOSIVE ANGER IN CHILDREN AND ADULTS

## A Look at Causal Factors and Treatment Strategy

© By Stephanie Ray, USA

**T**his paper serves to look at a current or acute parasitic infection as source for unexplained explosive anger or a feeling of being “not self”.

In addition, these symptoms are noted indicators; severe / abrupt change in tolerance, lack of energy, crave sweets/ carbohydrates, hard distended stomach, hard and loose stools, gas after eating, bad breath, itchy rectum.

### *What defines a parasite?*

An organism that grows on, feeds on, or is sheltered by another organism and obtains benefits from the host, which it usually injures or causes a reduction in vitality.

### *A History of Parasites<sup>1</sup> in Clinic*

During four years testing every patients stool for parasites at either Dowell Laboratory or Institute of Parasitic diseases 99.9% of them had at least one and as many as five different parasites, fungi or yeast infections. This patient base is of an income and education level of above the national average, signifying this issue is not isolated to areas of economic or educational need.

The most notable attribute and characteristic of parasites is that as they metabolize and excrete waste, they release neurotoxins which skewer emotions and mental functions. These toxins acidify tissues in the body further promoting fungal issues and oxygen deprivation.

Parasites increase our need to detoxify the body thus overworking the organs of elimination: lungs, kidney, liver, skin, and bowel. They carry virus with them and gradually wear down the immune system making us more susceptible to other micro organisms. They can be the hidden cause of many diseases, subtly

mimicking conditions such as IBS<sup>2</sup>.

When liver stagnation is present, signifying both or one of the detox phases in the liver is congested, we see additional signs of irritation, difficulty staying asleep through the night, obsessive thoughts, yeast flare up, and an inability to concentrate<sup>3</sup>.

As liver congestion and parasitic infestation increase many adult patients report a slow mutation of “not being myself”. This metabolic waste blocks the neurotransmitters to the brain and creates a slow mutation of the personality. For parents, they report uncharacteristic and “explosive anger” in their children with unexplained or apparent causal factors.

If we view this through the combination of TCM (Traditional Chinese Medicine) and physiological biochemistry we see the following:

Liver Qi Stagnation / Liver Congestion = First Morning Urine pH too high (above 6.5)<sup>4</sup>

‘Dirty Blood’ / Organic Urine Acid Test (OAT)<sup>5</sup> often shows imbalance of hippuric, 2-hydroxybutyric, and VMA / metabolic waste further congests liver structure and its function.

Shen (spirit) disturbance<sup>6</sup> / High ammonia / Liver and bowels unstable: constipation / loose stools.

### *A Child's Case History*

Young man, age 12 on the autism spectrum. Currently he is taking these daily: Liver Life, a liver restorative and NDF, a heavy metal mobilizer and binder, and additional support supplements for his terrain support—bowels are

moving daily. This young man becomes moody and has bouts of explosive anger with his family, teachers, and peers; tackling them. He is expelled from school. He alternates between explosive anger to lazy (“couch potato”) and seems in a fog at different times during the day. He also has persistent itchy bottom and his urine smells heavily of ammonia.

He is kept on his regular protocol, an additional anti-parasitic formula is added, 1 drop a day for 7 days—increasing to 2 drops a day for another 7 days. The improvement in these behaviors have been noted by his mother and aid:

“He is not so moody, nor angry, and for the first time in a while it is easy to see what he is feeling and thinking, he has purpose to his sounds and actions. We haven’t seen that before.

His stools after one drop....I saw ‘shredded tissue paper’ it also was floating, black chunks. He was calm enough to do an EEG at the doctors’ office. I see other things that are totally new for him, like wanting to paint all the time, doing things that take time. He usually is lazy, now he wants to create. It’s like his mind has less brain fog and he craves more than being a couch potato. I just realized I have not seen him itching his bottom since he started the anti parasitic formula!”

### **An Adult Case History**

Female patient, 46 years old. Presents with severe gastrointestinal dysbiosis. This has been an ongoing issue for 12 years. In the past, patient has tested positive for tapeworms. Gut issues still unresolved, parasites still present. She has OCD behaviors along with a ‘complaining disposition’.

Patient begins protocol of heavy metal detoxification and anti-parasitic removal. After two and a half weeks on this protocol: 2 K-min<sup>7</sup> capsules with meals, 5 drops anti-parasitic formula, and 6 drops heavy metal remover with liver and kidney support 2 times per day—patient passes whole sheep liver fluke.

“My naturopath and I are thrilled with the results! Nothing had changed in the lab testing in 4 months on standardized artemisia capsules, but combining a full parasitic formula with liver and heavy metal support has made so much difference in my moods and energy level.”

### **Treatment**

To begin we want to open and support the organs of elimination. Amoeba will be leaving the body primarily through the bowels with additional waste being managed and processed by the liver. Once we have these systems regulated it is possible to begin supporting the terrain

from being a good host for amoeba and escorting them out of the body.

#### **Step 1**

Begin with bowel support of Oxy Powder or Oxy Oxc. Take to promote 2–5 bowel movements a day for minimum of two days before going on to Step 2.

#### **Step 2**

Support liver structure and function with particular focus opening detox phase I & II, do this for five days before going on to Step 3.

#### **Step 3**

Begin Diatomaceous Earth to support removal of large parasites, 2–3 capsules with food 3 x per day for 4 days before going on to Step 4. Take for 5–7 days.

#### **Step 4**

Begin anti-parasite, we suggest either of these two formulas: Mume Pill<sup>8</sup> for biomedically defined disorders as ascaris<sup>9</sup>, roundworms, chronic gastroenteritis, post-gastrectomy syndrome, colitis, or chronic dysentery. Suggested intake: 9 grams 1–3 times per day for 2–4 weeks. Or Artemisia & Clove<sup>10</sup>, may be used for such biomedical defined disorders as ascaris, lumbricoides, balantidium coli, blastocystis hominis, cryptosporidium, dientamoeba fragilis, entamoeba coli, entamoeba histolytica, entamoeba hartmanni. Intake period, 2 weeks on at full dose—one week off—resume at full dose for 2 weeks.

#### **Step 5**

Support the constitution with the individuals terrain remedies as needed. Eat foods for improving liver function from the cruciferous and indole families, as well as foods that further alkalize the body.

### **Prevention**

1. Balancing the terrain stops you from being a good host. Dealing with the conditions and situations that interfere with treatment must be resolved. Go to the BioRay Wiki to read more<sup>11</sup>.

2. When dining out take one Betaine HCL<sup>12</sup> or a dose of an anti-parasitic formula before the meal. Chew your food<sup>13</sup> to a liquid and eat without stress!

3. At home, soak your food in 1/2 tsp. bleach to 2 gallons of water for 20 minutes, then rinse with clean water. Soaking veggies in acid oxidized water with a pH of 2.8 (Micro unit) works as well.

If living in metropolitan area, even if you have no

<sup>7</sup> K-Min (Min-Col/Diatomaceous Earth) - <http://www.daily-mfg.com/> <sup>8</sup> Chinese Herbal Medicine, Formulas and Strategies, pgs 466, 467. © 1990 Bensky & Barolet, Eastland Press. <sup>9</sup> An estimated 807-1,221 million people in the world are infected with Ascaris lumbricoides, CDC - Centers for Disease Control. November 2, 2010. <sup>10</sup> BioRay, Inc. symptoms, it is a good idea to go on a parasite cleansing program at least once a year.

5. Family members and intimates must be treated as well.

Wash your hands by going around the cuticle and under the nails with soapy hands.

### Conclusion

Parasitic infections can be insidious and mutate personality characteristics to the point of not knowing 'self'. Irrational, sad, and disturbing behaviors have been noted. As one patient asked, "Can taking Artemisia and Clove make me happy?" It took a moment for this author to ponder and respond, "Do you feel as if you have your sense of well being back, like when you were a kid?" Her answer was, "Yes". 🌸

#### ABOUT THE AUTHOR

With twenty years of experience in herbal medicine, **Stephanie Ray** brings to her position as President of BioRay Natural Detox Company a wealth of formulation knowledge and clinical experience. BioRay began as a collaboration between the author and her then husband, Dr. Timothy Ray, OMD, L.Ac.. Together they operated five traditional Chinese and biological medical clinics in Santa Monica, California over a span of 14 years.

CytoFlora™ the first cell wall lysed probiotic tincture is showing outstanding results in the lives of children on the Autism Spectrum.

*"Our son had a flourish of more COMPLEX LANGUAGE and IMAGINATIVE PLAY after starting Cytoflora.*

*I love this product so much I could kiss the bottle every day."*

*- Val, Mother*

*"When we used Cytoflora, we FINALLY saw results.*

*It has been amazing!"*

*- Taryn, Mother*

100% of participants had a decrease in immune response to 7 pathogenic gut bacteria in only 35 days!\*

\*These statements have not been evaluated by the FDA. This product is not intended to diagnose, treat, cure, or prevent any illness or disease. The testing measured IgA and IgM levels of Klebsiella pneumoniae, Proteus mirabilis, Citrobacter koseri, Pseudomonas aeruginosa, Pseudomonas putida, Morganella morganii, and Hafnia alvei.
